Notes: Each official Recording covers a 24-hour, noon to noon period. The first date of each pair quoted is for the afternoon (PM), evening, or first milking of the period. This is also the official Recording Date. The second date of the pair is the following morning's (AM) or final milking of the period. For 'Factored' herds, the due date of the recording visit will alternate between the PM and AM dates at each successive recording. Recording on the scheduled dates helps NMR manage the transport and testing of your samples and prompt return of your results.

To determine your scheduled recording dates: 1) Find your last recording date in the body of the table. 2) Note the letter on the **LEFT** of that date. This is your recording pattern. 3) Subsequent recordings fall due on the dates corresponding to that pattern letter. E.G. If you record on 20TH/21ST Oct 2026, you are using pattern K. Your next recording will be 2ND/3RD December 2026.
